Dream Cars

My project entitled "Dream cars" is a web based application where one can find an used car easily according to his requirements. It is difficult to find a right car for people who are looking for an used car. This application helps to find the ideal car from places nearby. In this application a registered user can search for a desired car or post an ad to sell the car.

For those who are willing to buy the right car, this application helps them by asking few questions. And by knowing their interest it shows the best matched cars with its price and all other details.

Users can get the details of sellers and also directly chat with sellers for knowing more about the car. Users can give feedback about the application. Security is also one of the main feature of this website, registration and logic are provided with strict validations in this.

Technologies used:

Php, Html, CSS, Javascript, Mysql

Modules:

1. Admin Module
2. User Module

Admin Module

- Login
- Approve / View / Delete User
- Approve / View / Delete Ads

User Module

- Register
- Login
- Search cars
- Sell cars
- Buy cars
- Give feedback
- Chat with sellers
